Table 2: DESCRIPTIVES FOR THE FOUR SCENARIOS OF NUCLEAR WEAPONS USE

The syntax for table 2 can be found in the code chunk below.

```

# scenario 1
table2.1 = data %>% filter(is.na(scenario1_bin)==F) %>%
  group_by(COUNTRY) %>%
  count(scenario1_bin , wt = Combined_weight_trimmed_0.995) %>%
  mutate(prop = n/sum(n)) %>%

```

```

select(-n) %>%
pivot_wider(names_from = c(COUNTRY, scenario1_bin), values_from = prop)

# scenario 2
table2.2 = data %>% filter(is.na(scenario2_bin)==F) %>%
group_by(COUNTRY) %>%
count(scenario2_bin , wt = Combined_weight_trimmed_0.995) %>%
mutate(prop = n/sum(n)) %>%
select(-n) %>%
pivot_wider(names_from = c(COUNTRY, scenario2_bin), values_from = prop)

# scenario 3
table2.3 = data %>% filter(is.na(scenario3_bin)==F) %>%
group_by(COUNTRY) %>%
count(scenario3_bin , wt = Combined_weight_trimmed_0.995) %>%
mutate(prop = n/sum(n)) %>%
select(-n) %>%
pivot_wider(names_from = c(COUNTRY, scenario3_bin), values_from = prop)

# scenario 4
table2.4 = data %>% filter(is.na(scenario4_bin)==F) %>%
group_by(COUNTRY) %>%
count(scenario4_bin , wt = Combined_weight_trimmed_0.995) %>%
mutate(prop = n/sum(n)) %>%
select(-n) %>%
pivot_wider(names_from = c(COUNTRY, scenario4_bin), values_from = prop)

# combine
table2 = rbind(rbind(rbind(table2.1, table2.2), table2.3), table2.4)
